

What is your outlook of the [RSC](#) token in 2024?

Call for 2024: Bullish. Long term Buy and Hold.

Fundamental Analysis: [White Paper, Founding Team, Community]

The novel idea of Brain Armstrong, the co-founder of ResearchHub, to open source scientific research (github equivalent for scientific research) and its associate cryptocurrency ResearchCoin \$RSC has tremendous potential for Bullish movement in 2024 and subsequent years.

- This will bridge the gap between the community of Scientific Research and Business adoption of Technology.
- \$RSC has been created to incentivise participation in highly collaborative and open-access platform ResearchHub.
- Major issue in Academia:
 - prioritisation of what to work on.
 - reproducibility of results.
 - alignment to market incentives.
 - access to funding.
 - cost and delays from academic journals.
- ResearchHub takes an elegant solution to solve the above issues.
- A great question arises whenever dealing with cryptos: Is it a Scam? A pump and dump scheme. (Circulation percentage is less than 10 percent). The trust in the founding team and the problem it is trying to solve can be used as an account to be confident of genuinity.

Decentralised Science is booming up.

- The scientific research market is affected by centralised decision-making, bureaucratic red tape, and flawed incentive structures.
- Scientists, constrained by personal financial needs and career competition, may focus on citation counts over impactful research.
- Analogous to monetary policy, the current academic system disrupts the natural dissemination and generation of knowledge.
- DeSci promises a future of:
 - Science becomes transparent, efficient, and reliable, enabling breakthroughs.
 - Global participation in research is facilitated, with minimal entry barriers.
 - Researchers gain fair rewards for their contributions and intellectual property.
 - Improved capital allocation and increased encouragement for risk-taking.
- Another DeSci example: Molecule DAO (Funding early stage Biotech Research)/ Vita DAO/ Data Lake/. The community is hot and growing.

Conclusion on the Coin

- \$RSC is incentivising scientific research which has an extremely high potential of Growth.
- This is a relatively new space backed by an excellent co-founder having a proven track record of success and a great community of science.
- Although in its initial stage, it points towards a call for long term buy-and-hold with early adoption and first mover advantage.

2024 Outlook

The money behind Academic Publishing:

The academic publishing industry has a financial turnover of USD 19 Billion.

The top 5 players in this market are:

Elsevier, Black & Wiley, Taylor & Francis, Springer Nature and SAGE, which control more than 50 % of the market between them.

Another pain point is that the government funds all stages of research production, but again the research results are obtained with a fee.

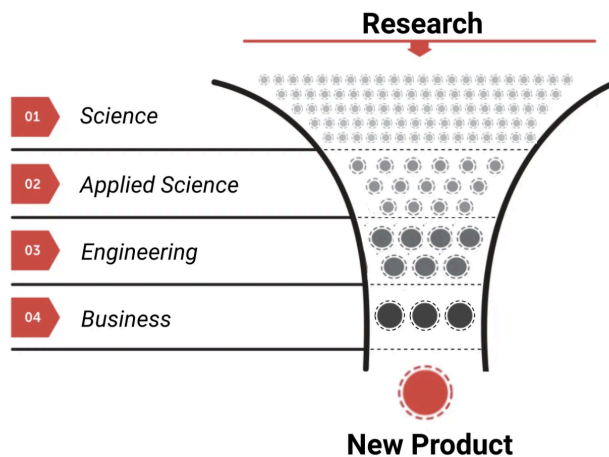

- Considering \$20 Billion in sales and a PE ratio of 25:1. The market cap can be: \$500bn. Can ResearchHub be 5% of this i.e \$25Bn. (Present Market Cap of \$32 million).

ResearchHub is trying to disrupt this marketplace. Inshort trying to make this Scientific research and peer-review free from bureaucracy.

What can bring researchers to ResearchHub?

The idea of valued business from research has the potential for ResearchHub to disrupt Academic Research.

Several million academic papers are published each year, but only a small handful of them actually lead to new products and services where people can really benefit from them.

The above graphic shows how most scientific research happening isn't leading up to successful business/products.

Future growth of ResearchHub:

- ResearchHub aims to transform the scientific community with platform advancements, better collaboration tools, integrations, and impact analytics.
- Future plans for ResearchCoin include partnerships to widen influence and foster a global ecosystem that accelerates scientific progress.

Tokenomics (Current)

Market Cap: \$32 million.

Self Circulation: 93.8 million \$RSC (1 \$RSC = \$0.35)

Total Supply: 1 Billion \$RSC

Percentage of Circulation: 9.3 %

Marketplace: UniSwap (DEX) and CoinEx (CEX)

TGE: 1st August 2020.

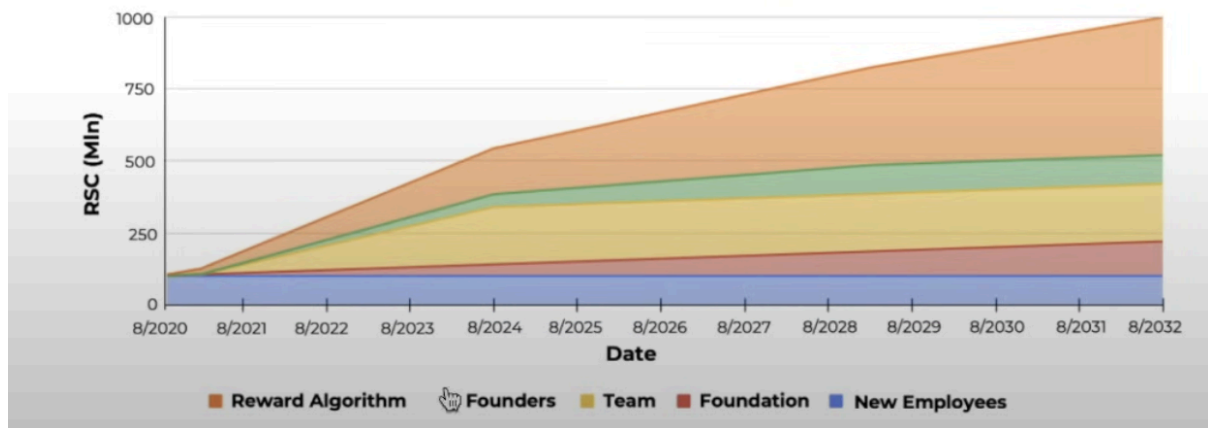

The \$RSC tokenomics has been designed based on token engineering principles centered around the concept of the Web3 Sustainability Loop.

This implies that the primary focus has always been on growing the ecosystem while ensuring its long-term self-sustainability.

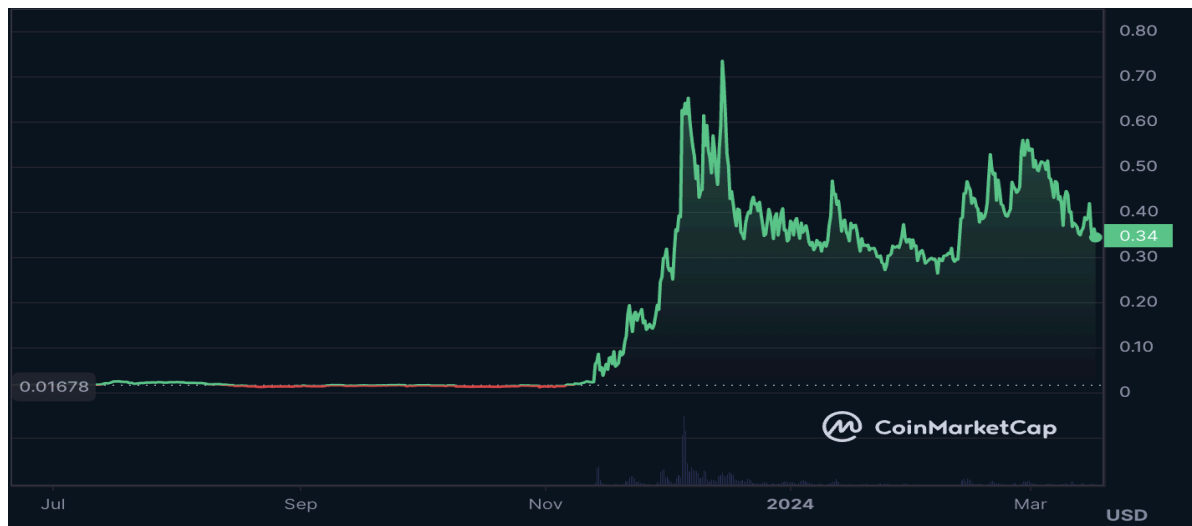

Distribution and Emissions:

- 60% distributed to the community and users of ResearchHub, with a maximum emission of 5% per year (upper limit).

The total supply of \$RSC may be released in circulation over a timespan of 12 years from the Token Generation Event (TGE), which occurred on August 1st, 2020.

- From August 2024, the team will have access to all of its funds.

From The \$RSC chart shown above the following can be concluded:

- The massive bullish movement during November 2023. This was due to Brian Armstrong mentioning Research Hub on Twitter.
- The coin gained momentum again during January 2024.
- From January to March Market Capital has increased from \$9.5m to \$32m.
- The last six months price movement suggests peaking interests from the scientific community.
- Listing of \$AXGT (Axon DAO): another DeSci token which got listed in February 2024. Following its listing, \$RSC took off from \$0.3 to \$0.5. This is indicative of the gaining interest amongst the DeSci community.
- November 2023 was the month when DeSci was extremely bullish. \$AIMX went from 0.005 to 0.02. Although this month can account for speculation in this market, it is extremely necessary for the scientific community to notice and to bring the novel concept to the world.

- \$RSC had a bull run between 10th Feb 2024 to 28th Feb 2024. An event during this: Vita DAO and Cryo DAO collaboration.
- Therefore, any significant event in the DeSci space leads to bullish trends in \$RSC. This is also indicative of the fact that the crypto community has ascertained that DeSci is a promising bullish concept.
- Future DeSci Events:
 - BioXYZ token launch. This can be the biggest DeSci token launch. It got Vita DAO/Hair DAO/Psy DAO and other decentralised medical organisations.
- A great conclusion can be drawn: Less attention is being paid to \$RSC right now.
- A great upside can be seen when \$RSC (a brainchild of Brain Armstrong) gets listed on Coinbase or when Brian himself starts to give attention to it to make it more prominent or when Research Institutions start putting up their work on Research Hub.

Market Cap Graph

- From \$2m in Nov 2023 to \$60m in Dec 2023 to presently around \$34m. \$RSC is proving to be extremely bullish.
- Analysis is Indicative that \$RSC is extremely mispriced presently and has a huge upside potential.
